

ZHIGER MANSUR

Indie Founder & Full-Stack Developer | Almaty, Kazakhstan

manssjones@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

17-year-old indie founder and full-stack developer from Almaty. Shipped five products solo in roughly six weeks. SafeBiz came from watching my family get hit with surprise tax penalties — I built the tool I wished they had, and picked up 120 organic signups. VibeScan ran a security scanner on 21 real AI-generated apps and pulled an 80-person waitlist before I pivoted into ShipReady after analyzing 800+ sources of market research. Operating on \$500/month from Kazakhstan.

Key metrics: 2nd place EcoSolutions Hackathon 2026 · 120 organic signups (SafeBiz KZ) · 80-person waitlist (VibeScan) · 14 GitHub stars (CodeVault) · 5 shipped products · IELTS 6.5

VENTURES & PRODUCTS

SafeBiz KZ — Founder & Sole Engineer

2026

AI tax compliance SaaS for Kazakhstan SMBs, timed to the 2026 Tax Code overhaul. [GitHub](#)

Built this because my family got hit with surprise tax penalties — I knew the problem firsthand. Shipped a tax calculation engine and regime comparison calculator (patent / simplified / standard) so SMBs can model obligations under the new code. Added mobile transfer risk scanner and tax deadline calendar. 120 organic signups, no marketing. Deployed on Railway with Supabase Auth + RLS.

Stack: Next.js, TypeScript, Tailwind CSS, Supabase (Postgres, Auth, RLS), Railway.

ShipReady (VibeScan v2) — Founder & Sole Engineer

2026, in progress

AI security audit for vibe-coded applications. Independent, cross-platform, self-serve.

Evolving VibeScan into a production-readiness scanner for the 50M+ apps shipped from Cursor, Lovable, Bolt, Replit, and v0. Original VibeScan ran on 21 AI-generated projects and surfaced real vulnerabilities; demand validated by 80-person waitlist. Pivoted from regression detection to security audit after research across 800+ sources and 4,700+ Reddit posts identified security as the unaddressed pain in AI coding. Cross-platform by design: paste a GitHub URL, get a vulnerability report and auto-fix PR.

Stack: Next.js, TypeScript, Tailwind CSS, Supabase, Semgrep, Claude API, Vercel.

EcoAlmaty — Developer

2026

Environmental monitoring app. **2nd place, EcoSolutions Hackathon** (ALEM Innovation Center × Almaty Education Department). [GitHub](#) · ecoalmaty.vercel.app

Almaty has bad air quality, but AQI 145 means nothing to most residents. Built a tool that pulls live data from city monitoring stations, uses Claude to translate raw numbers into plain-language explanations and local advice, and wraps it in a streak-based habit loop. Solo, 8 hours from start to deploy. Used Claude Design for UI mockups before writing code.

Stack: Next.js, TypeScript, Tailwind CSS, Supabase, WAQI API, Claude API.

AzamatAI — Founder & Sole Engineer

2026

Bilingual (Russian / Kazakh) AI assistant, built for a city-level science competition. azamat-ai.vercel.app

Shipped a working bilingual product end-to-end with Russian and Kazakh language UX — directly relevant to underserved Central Asian markets. Compressed full build into a tight deadline using AI-assisted workflows.

Stack: Next.js, TypeScript, Tailwind CSS, Vercel.

CodeVault — Founder & Sole Engineer

2026

SaaS code snippet manager for developers. [GitHub](#) · **14 stars** (most-starred repo in portfolio)

First shipped SaaS — built from scratch through deployment on Railway. Dark professional UI inspired by Linear, Vercel, and GitHub. Foundation project that proved the solo full-stack workflow before scaling to AI products.

Stack: PHP, Supabase (Postgres), Railway.

RESEARCH & OPERATIONS

- Built a startup research pipeline (*agent.py*) that automatically scrapes Hacker News, Reddit, and YouTube and runs LLM-driven analysis to surface and validate market problems before building. Used to evaluate 15+ hypotheses; ruled out a Kaspi.kz merchant API product after finding an established local competitor, and assessed KASE and an AI chatbot agency model against personal skill fit instead of chasing hype.
- Maintain a *CONTEXT.md* / *CLAUDE.md* sync system for persistent context across AI-assisted development sessions — treating dev tooling as engineering infrastructure.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL, HTML/CSS

Frontend: Next.js, React, Tailwind CSS, responsive design

Backend & Infrastructure: Supabase (Postgres, Auth, Row-Level Security), Railway, Vercel, Docker, WSL2 / Linux (Ubuntu)

AI Development: Claude Code (advanced, autonomous multi-file workflows), MCP server development and integration, custom LLM-driven research pipelines, Anthropic API, prompt engineering for code generation

Dev Tooling: Git, GitHub CLI, SSH, Obsidian knowledge systems, custom automation scripts

EDUCATION

140 Gymnasium — High School, Math/Physics focus, 11th grade graduating 2026

GPA: 4.5 / 5.0 | IELTS: 6.5 (Professional working English)

Actively applying to international ML / Deep Learning programs, including the Chinese Government Scholarship (CSC).

LANGUAGES

Kazakh (Native) · Russian (Native) · English (Professional working, IELTS 6.5)
